Ramez Gamel

Machine learning and software engineer

Skills

Machine learning
PyTorch, training and validation, inference, data preprocessing, checkpointing, hyperparameter tuning, model evaluation

LLM evaluation
Arabic and English prompt design, accuracy, relevance, instruction adherence, safety, adversarial test prompts

GPU and systems
CUDA, GPU memory optimization, CPU/GPU bottleneck analysis, profiling, Linux, Bash, kernel modules

Programming
Python, C/C++, Java, TypeScript, JavaScript, SQL, NumPy

Back end
FastAPI, Django, PostgreSQL, Redis, REST APIs, Cloudflare D1 and R2

Front end
React, HTML, CSS, Tailwind CSS, Vite

Testing and tools
Pytest, Vitest, Playwright, libFuzzer, Jazzer, Git, Docker, GitHub Actions

Education

BA, English Department
Zagazig University, 2019–2023

Languages

Arabic (native), English (fluent)

Certifications

Frontend Development (React.js)
Computer Essentials

Machine learning and software engineer with hands-on experience building PyTorch training and validation pipelines, evaluating large language models and profiling GPU workloads. I combine Python, React and systems work with Arabic and English model evaluation and adversarial testing.

Experience

Software Engineer, Python
Dec 2023 – present

Freelance, remote

- Build PyTorch pipelines covering data preparation, training, validation, checkpointing, evaluation and inference.
- Profile GPU and CUDA workloads to find CPU, GPU, memory and data-loading bottlenecks and improve training efficiency.
- Develop Django and FastAPI services backed by PostgreSQL; Redis caching and optimized queries cut API response time by about 40%.
- Automated Python data pipelines that save several hours of manual processing and reporting per task.
- Containerize with Docker, set up GitHub Actions CI/CD and write automated tests with Pytest.

Advanced AI Data Trainer
May 2023 – present

Data Annotation

- Design Arabic and English prompts for LLM training and evaluate responses for accuracy, relevance, context and instruction adherence.
- Review technical answers to software engineering questions to improve programming-oriented model behavior.

Safety and LLM Evaluations Data Annotator
Jul 2023 – Apr 2025

Outlier

- Reviewed model outputs against safety and quality policies covering harm, misinformation, bias and sensitive topics.
- Designed adversarial test prompts and wrote auditable explanations of model-quality judgments for benchmarking.

Front-End Developer, React
2023 – present

Freelance

- Build responsive interfaces in React, JavaScript, HTML and CSS, turning product requirements into working web experiences.

Data Review Expert
Aug 2022 – May 2023

Remotasks

- Multimodal annotation and evaluation across image, video, voice, text and audio datasets, including model-output quality checks.

Projects

WorkLedger 2026

React, TypeScript, Vite, Cloudflare D1 and R2

- Private time-tracking and invoicing app: one record of work sessions drives the timesheet, earnings, invoices and PDF reports.
- Local-first with IndexedDB, synced to D1 and R2; 24 recorded design decisions and 18 automated tests.

Security fuzzing targets Jun – Jul 2026

C, C++, Java, libFuzzer, Jazzer, ClusterFuzzLite

- 23 codebases built as fuzzing targets, with 141 fuzz targets and layered, bounds-checked parsers for archives, media and telemetry formats.
- ByteHarbor (Java 21): archive library with deduplication, deltas, search and Merkle proofs; 22 fuzz targets, 185 passing tests.

PyTorch training pipeline and GPU optimization

Python, PyTorch, CUDA, NumPy, Linux

- Reusable workflows for data loading, preprocessing, training, validation, checkpointing, evaluation and inference.
- Analyzed GPU utilization, memory pressure and CPU/GPU synchronization, and optimized batch processing for training throughput.

Linux kernel and systems engineering

C/C++, Linux, kernel modules, drivers, Bash

- Kernel modules and driver-oriented programming to study kernel and user-space interaction, with low-level debugging and performance analysis.

Other experience

Vodafone UK and Teleperformance 2022 – present

- Customer service, then telesales and retention at Vodafone UK (2022–2025); repeatedly recognized as a top performer.
- Back-office operations at Teleperformance since 2025; recognized three times as a top achiever.

An Arabic version is available on my portfolio.
